Kash.

Made by Maubrick Khian D. Astuto

The comprehensive, beautifully crafted accounting software for the modern professional.

Welcome to Kash

Kash is built on a unique architecture: it is a **local-first** desktop application wrapped in Electron, giving you the speed of a native app, but it seamlessly syncs to the cloud using Firebase. This means you can work offline, and your data is instantly backed up the moment you regain connection.

Workspace Management

Are you managing multiple companies? Kash isolates data by **Business ID**. When you log in, you are presented with the Business Selector.

1. Click **"Create New Business"** to establish a new ledger.
2. Select an existing business card to dive into its dashboard.
3. To switch businesses while working, click the Workspace indicator in the top right corner of the navigation bar.

The Dashboard

The Overview tab is your financial command center. It provides real-time metrics pulled directly from your general ledger.

MASTER METRICS

The dashboard calculates **Total Assets** by summing all accounts classified as 'Asset', and **Total Receivables** by summing all active, unpaid sales invoices.

QUICK TRANSFER

The **Move Treasury Funds** modal allows you to quickly transfer money between two bank or cash accounts without needing to write a manual journal entry.

Chart of Accounts

Everything in Kash flows into the Chart of Accounts (CoA). You can access and manage your accounts from the **Settings** → **Chart of Accounts** tab.

- **Account Types:** Asset, Liability, Equity, Income, and Expense.
- **Bank Accounts:** Ensure your cash accounts have `isBankAccount` checked so they appear in the Banking and Quick Transfer screens.

Creating Journal Entries

The **Journal** tab allows you to manually post double-entry transactions. This is typically used for depreciation, tax adjustments, or complex multi-line transactions.

Step-by-Step: Posting a Journal

1. **Click "New Journal Entry":** Set the date and provide a clear *Narration* (e.g., "End of month depreciation").
2. **Add Lines:** Select an account. Enter the amount in either the **Debit** or **Credit** column.
3. **Balance the Journal:** Kash will highlight the total Debits and Credits at the bottom. **A journal cannot be saved unless Debits equal Credits.**
4. **Journal Templates:** If you perform the same entry monthly (e.g., rent accrual), you can save the lines as a **Template** to load them instantly next time.

Sales & Purchases Workflow

Kash handles the entire document lifecycle for trading operations. The process is identical for both Sales (Customers) and Purchases (Suppliers).

1. The Quote / Order

Create a **Sales Quote** to send to a customer. Once approved, it can be converted to an active **Sales Order**. These documents do *not* hit your general ledger.

2. The Invoice / Bill

Generate an **Invoice** (for Sales) or a **Bill** (for Purchases). Once saved, Kash automatically debits Accounts Receivable and credits Sales Income.

Managing Inventory

Found under the **Operations** tab, Kash tracks your inventory in real-time.

- **Qty On Hand:** Automatically calculated based on the items sold on invoices and purchased on bills.
- **Inventory Adjustments:** If you find a discrepancy (e.g., stock loss or damage), you can write off stock. You must select an expense account (e.g., "Inventory Shrinkage") to absorb the cost.

Fixed Assets & Depreciation

Also in **Operations**, you can maintain a Fixed Asset Register.

Register an asset with its Purchase Price, Salvage Value, and Useful Life. Kash supports multiple depreciation methods: **Straight-Line**, **Declining Balance**, and **Units of Production**.

Banking & Reconciliations

The **Banking** tab ensures your Kash ledger perfectly matches your real-world bank statements.

Bank Feeds & Imports

Import CSV statements from your bank. Kash will queue these as "Unreconciled" feed transactions.

Bank Rules

Create rules (e.g., "If description contains 'UBER', assign to Travel Expense"). This automates the creation of journal entries for repetitive bank feed items.

Reconciliation Process

Match your bank feed lines against ledger entries. Enter your actual Statement Balance, and Kash will ensure the cleared ledger entries match.

Payroll & Time Tracking

Manage your human resources financially directly in Kash.

- **Employees:** Set up staff with standard hourly rates.
- **Billable Time:** Log hours worked on specific dates. These hours can optionally be linked to a Customer to be invoiced later.
- **Payslip Items:** Configure global earnings, deductions (e.g., Taxes), and contributions (e.g., Superannuation/401k). You map these to specific expense and liability accounts in your CoA.
- **Generating Payslips:** Select an employee, define the pay period, and Kash will automatically pull in unbilled time and calculate Net Pay based on the Payslip Items you assign.

Settings & Localisation

Kash adapts to your region. Navigate to the **Settings** tab to configure:

Business Details: Set your logo, theme color, and currency symbol which will appear on printed invoices.

Localisation: Choose your Date Format (e.g., DD/MM/YYYY vs MM/DD/YYYY), timezone, and fiscal year start month.

App Defaults: Define document prefixes (e.g., `INV-001`) and default accounts for rapid data entry.

Team & Role-Based Access Control (RBAC)

Security and delegation are critical. Kash features strict, unalterable roles to protect your financial integrity. You can invite team members via the **Settings** → **Team** tab.

Role	Description & Permissions
CEO / Owner	Full access. Can kick members, change settings, view reports, and edit transactions.
Senior Accountant	Can invite others, view reports, and edit transactions, but cannot change core settings.
Junior Accountant	Data entry role. Can edit transactions, but cannot view sensitive overarching reports.
Auditor	Read-only role. Can view reports and transactions but cannot edit any data.

The Audit Log

Every action taken (Create, Update, Delete) by any user is permanently recorded in the **Audit Log**, viewable by authorized roles in the Settings tab. This ensures total accountability for all financial alterations.
